Re: Neoweb application at the Mumbai Monorail Project of L&T

Dear Sirs:,

I want to thank you and PRS for the timely assistance and support in the design and supply of Neoweb Cellular Confinement solution for stabilization of roads in the terminus complex of the Mumbai Monorail Project being done by L&T at Wadala in Mumbai city.

This project required the construction of a road on uncontrolled fill placed on soft marine clay in the monorail depot and terminus complex which serves the maintenance operations of the client.

The project challenge that we are facing includes a weak sub-grade soil of soft marine clay overlaid with uncontrolled fill. The advantages that we found using the Neoweb were the Neoloy polymer used, its unique properties which performs better for load support conditions, ease and speed of installation and a project cost savings vs. conventional design.

PRS assisted us during the design phase and will assist us during the implementation phase by providing field instruction and training to implement the Neoweb solution.

Deliveries have been already done, and we found PRS Ltd to be a knowledgeable and professional soil stabilization solution provider..

Thanking you

Yours faithfully
